This PCB is my design, scheamtic is almost all from Smoothieboard,
but this board is designed to fit other PCBs like Printrboard and others.
CODE—CHANGES NEEDED TO USE THIS BOARD:
The DAC is not native to Smoothie, so I wrote my own code to use it.
If you're using it and you need the code, write to me on Hackaday.io or on Lerche@lerchetech.dk
Last but most important: Have fun!
