Vendor/Customizing instructions

1. Fork Soyuz on GitHub to create your own copy. Clone onto your PC.
2. Turn your logo into a footprint using bitmap2component, save in locallib.pretty.
3. Place it on the topside of the bottom plate. It is left intentionally blank for this.
4. Alt+3 to render and see if it looks nice.
5. Using the Plot tool, generate the gerbers.

The bottom plate is reversible.
